

Krastyo Yordanov

Game Developer — AI-Accelerated Web Games

Sofia, Bulgaria (remote) | synththeway@gmail.com | +359 887 918 657 | English — fluent
dracovallis.com · github.com/Dracovallis · linkedin.com/in/krastyo-jordanov-a85319a3

Developer with 8+ years shipping production web software and three finished games behind me — two live multiplayer browser games and a complete Unity title. I work fast and alone: concept → playable prototype → shipped, with AI coding tools as a normal part of the loop rather than an experiment. Co-founder of Swiftix, a live ticketing platform I built end to end. I write my own music and make my own art assets, so a prototype never waits on anyone else.

GAMES & INTERACTIVE PROJECTS

Pikami.se — multiplayer word game

pikami.se · live

- Wordle-style guessing game with single player, a daily challenge, and head-to-head matches against a friend
- Real-time match state over WebSocket; designed, built, and shipped solo from idea to public release

React · CakePHP · MySQL · WebSocket

Antikonti — party card game (Cards Against Humanity-style)

antikonti.com · live

- Second-screen architecture: a TV or monitor acts as the shared host screen, players scan a QR code and use their own phones as controllers
- Real-time lobbies, round flow, and per-player hands synced over WebSocket

React · CakePHP · MySQL · WebSocket

Skullstorm — hero defense game (Android)

gameplay video ↴

- Wave-based defense game: the player controls a mage holding a castle against waves of undead
- Built the full loop — waves, spell unlocks, levelling, summonable reinforcements; complete and playable, never published

Unity · C# · Gameplay video: youtube.com/watch?v=oCLyZkeQ-Uc

AI-ASSISTED DEVELOPMENT

- Daily driver: **Claude / Claude Code** and **GPT** — writing, refactoring, debugging, and getting up to speed on unfamiliar code fast; AI-generated code is my normal starting point
- Heavy **Cursor** user — invited to Cursor's Sofia meetup as one of the top 1% of users in the city

PROFESSIONAL EXPERIENCE

Co-Founder & Lead Developer

Aug 2025 — Present
Sofia, Bulgaria

Swiftix — swiftix.bg

- Built and launched a live ticketing platform from zero: event creation, ticket sales, payment processing, a door-scanner app, and automated organizer payouts and statements
- Own the entire stack and every technology decision — frontend, backend, infrastructure, deployment
- Real product with real money moving through it, selling events across Bulgaria and Europe today

Senior Full-Stack Engineer

Apr 2021 — Aug 2025
Sofia, Bulgaria

Yotpo (SMSBump)

- Delivered features across an enterprise-scale microservice architecture serving millions of users
- Moved constantly between unfamiliar codebases, services and technologies — picking up whatever the task needed
- Worked the full stack: React frontends, backend services, CI/CD pipelines and monitoring

Full-Stack Developer

Jan 2018 — Apr 2021
Bulgaria

TobeCode

- Built warehouse management systems with real-time inventory tracking and heavy transactional load
- Developed e-commerce platforms with product catalogs, payment integrations and order management

TECHNICAL SKILLS

Languages:	JavaScript, TypeScript, PHP, C#, SQL, HTML/CSS
Web & Real-time:	React, Node.js, WebSocket, CakePHP, Phalcon, REST APIs, SCSS, jQuery
Game & Interactive:	Unity (C#), browser-based multiplayer, real-time game state, second-screen / QR controls
Data & Tooling:	MySQL, PostgreSQL, Redis, Docker, Podman, Git, Cypress, Postman
AI Tooling:	Claude / Claude Code, GPT, Cursor
Creative:	Cubase (original music & SFX), Photoshop, After Effects, Premiere, SketchUp

EDUCATION & LANGUAGES

Computer Programming	2015 — 2018	Bulgarian:	Native
Software University (SoftUni)		English:	Fluent
BA, International Economic Relations	2011 — 2015	Also:	Composer and multi-instrumentalist — released on Spotify, Apple Music, Bandcamp.
International Business School, Botevgrad
